
Nitto Denko N221 PE Foam Double-Sided Tape

Description

N221 is a medium performance, industrial grade foam tape coated on both sides with a high-tack acrylic adhesive. It is suited to bonding all common high-energy surfaces such as metals, glass, rubbers and plastics. N221 is also ideal as a temporary holding-curing tape to position and hold mirrors and other similar objects while liquid adhesives cure. This tape features a soft ductile foam core which allows for permanent bonding of slightly irregular substrates. It has a high tack, quick grab adhesive as well as providing full air, dust, and water resistance while dampening vibration and noise.
